LinkedIn | Portfolio

Summary

Full-stack developer who builds multi-tenant B2B SaaS and AI-agent products end to end, with production experience in payments and billing, row-level security, and audit-grade data layers. Civil engineering background, with entrepreneurial and research experience.

Technical Skills

- **Languages:** TypeScript, Python, Dart, SQL
- **Frontend:** Next.js, React, Vue 3, Flutter, Tailwind CSS
- **Backend & Data:** FastAPI, SQLAlchemy, Pydantic, Zod, REST APIs, PostgreSQL (Row-Level Security, Triggers), Supabase, Redis, Firebase Authentication
- **Architecture & Security:** Multi-Tenant SaaS, RBAC, OAuth, Webhooks, AES-256-GCM Encryption, Rate Limiting, Audit Logging
- **AI & Integrations:** OpenAI Tool-Calling Agents, Razorpay, Gmail API, Google Calendar API, Telegram, MSG91, Resend
- **DevOps & Tools:** Docker, Nginx, Linux VPS, CI/CD (GitHub Actions), Vercel, Amazon S3, Git, Vitest, Figma, Penpot

Professional Experience

Full-Stack Developer | Futurise Solutions *Aug 2026 - Nov 2026*

Research & Membership Platform for a SEBI-Registered Research Firm, *link*

- Built end to end as three surfaces: a public PWA site, a members' Terminal, and a staff Team portal.
- Designed the PostgreSQL data layer (row-level security, SQL functions, append-only audit log) and authentication: Google and email-link sign-in, signed sessions, single-device access, and a four-level staff RBAC ladder.
- Enforced a four-tier subscription paywall (Community, Standard, Pro, Institution) in the data layer, with copy-protected, member-watermarked Pro documents.
- Implemented Razorpay billing (server-side pricing, pro-rata upgrades, verified webhooks, GST invoice PDFs, automated renewal-notice emails) and a research publishing workflow (draft, review, publish, withdraw) with an HTML editor, live preview, and version history.

Dr. Assistant: AI Practice Assistant (SaaS)

- Built a multi-tenant SaaS assistant for a doctor in New Delhi: an OpenAI tool-calling agent (12+ tools) that triages Gmail, drafts replies, books and reschedules Google Calendar appointments, and sends a daily briefing, with a guard classifier screening contact messages.
- Created a per-contact memory layer (identity resolution, LLM-distilled facts, fuzzy duplicate detection and merge) and custom Gmail and Google Calendar OAuth integrations with idempotent sync.
- Designed prepaid Razorpay billing: HMAC-verified orders, a webhook that credits only captured payments, an append-only credit ledger, and a single funnel that reserves a spend hold, calls the model, and settles actual token cost.
- Secured the platform with AES-256-GCM encryption of PII, row-level security on every tenant table, and a fail-closed rate limiter.

Independent Software Developer *2024 - Aug 2026*

Rever Enterprise ERP, *link*

- Delivered a production-ready, full-stack ERP that digitized inventory, order processing, distributor management, and financial workflows for a multi-level distribution business.
- Architected the backend with FastAPI, PostgreSQL, and Redis: 20+ REST APIs, 15+ database tables, email and OTP authentication, and role-based access control.
- Developed inventory, order, approval, and ledger modules with hierarchical permissions, audit trails, and timestamped transaction records, plus responsive Vue.js admin dashboards.

- Integrated Firebase Authentication, MSG91 (OTP/SMS), and Amazon S3; moving media off the VPS to S3 cut disk and memory usage and prevented resource exhaustion during concurrent uploads.
- Containerized with Docker and deployed on a Linux VPS behind Nginx, keeping recurring costs low. Worked directly with stakeholders on requirements, iterative delivery, client demos, and UAT.

Projects

Local Legends: Football Community Platform (Co-founder & Sole Developer), *link*

- Co-founded and built, as sole developer, a platform that centralizes opportunities for grassroots football players; launched in Raipur and expanded to Kolkata.
- Reached 50+ downloads since launch.

eCRF Demo: Electronic Data Capture for Clinical Trials *2026*

- Built a demo eCRF / EDC platform for a clinical research client in India, replacing a paper and MS Word workflow with versioned digital forms, site-level data entry, and complete audit trails.
- Developed a drag-and-drop form builder and a client-side Word (.docx) importer that converts existing study documents into structured digital forms; added approve-and-lock version control with semantic diffing, and enforced data integrity with PostgreSQL triggers.

Built-Skin Innovations: Smart Facades (Pre-Seed Startup), *link* *2024*

- Designed a modular, climate-responsive façade system in SolidWorks and built its commercialization strategy and unit economics; selected for the SRUJAN Pre-Seed Incubation Program (Government of Gujarat, i-Hub Ahmedabad), and paused prototyping after assessing the capital needed for fabrication and validation.

Education

Executive PG Certificate in AI-Native Full Stack Engineering, IIT Kharagpur (in progress) *2026 - 2027*

PGDM in Entrepreneurship, EDII, Ahmedabad (two semesters completed) *2023 - 2024*

B.Tech, Civil Engineering, KIIT University, Bhubaneswar *2017 - 2021*

- **Mitacs Globalink Research Internship (2020):** scholarship recipient, Concordia University, Montreal
- **INSDAG Civil Award (2021):** best innovative structural design of a steel-intensive COVID-19 quarantine center
