Services and pricing guide

Automation & Analysis

Invoicing, follow-ups and payment reminders run on their own, and your numbers arrive as a clear weekly report.

Option 1 · Pay monthly

Monthly plan

Setup from ₹40,000 (one time) + ₹18,000/month

I host, maintain and support it. 6-month minimum.

Option 2 · Pay once

Buy outright

from about ₹1,25,000

Quoted after scope. Fees you've paid count toward it. After the purchase, hosting is yours to run, or you can add a maintenance plan from ₹9,000/month, with a 3-month minimum.

At a glance

Setup (one time)	from ₹40,000; typical range ₹40,000 to ₹80,000, agreed after scope
Monthly plan	from ₹18,000/month (6-month minimum)
Own the code	from about ₹1,25,000, quoted after scope
Maintenance plan after buying	from ₹9,000/month (3-month minimum)
Typical timeline	4–16 weeks, from the day you've sent your data and approvals
GST	18%, added to every invoice
Payment	setup in two parts (50% at signing, 50% at live testing); monthly plan invoiced monthly, UPI accepted

All prices are "from" prices, exclude GST (18%) and are not quotes. Your own figures are agreed after scope.

Add-on · AI, only where it's worth it

Not every automation needs AI. Most run on plain, predictable rules. During discovery I'll suggest AI only where it saves real time and is worth its running cost for how much you'll use it. Quoted separately; AI usage is billed at cost.

Reading documents. AI reads bills, invoices, POs and photos of registers, including handwriting, into clean data.
Drafted replies. Follow-ups and replies to common customer questions drafted for your team to approve and send.
Ask your numbers. Ask about sales, stock or dues in plain language and get an answer from your own data.

AI can make mistakes, including wrong or made-up answers, so I build it to suggest and draft, and your team checks before acting on it. I'm not responsible for its output or for decisions based on it.

What you get

Who it is for

- Manufacturers, distributors, warehouses and retailers who still retype dispatch slips, POs and bills
- Businesses that run orders and daily updates on WhatsApp
- Owners who only see their real numbers at month end
- Teams that spend too much time chasing payments

Problems it solves

"We type the same data again and again."

Dispatch slips become invoices, POs go into your system, bills go into your books. All by hand.

"We don't know our real numbers until it's too late."

Sales, stock and dues sit in different sheets and different heads, so you find out what happened long after it could have helped.

"Everything happens on WhatsApp, and nothing is recorded."

Orders, production and dispatch get agreed in chats and are forgotten by evening.

"Payments always come in late."

Chasing money is awkward and easy to forget, so it stays with your customers longer than it should.

What I build

Paper and documents to data

Send photos of registers, job cards and stock books, or forward bills, invoices and POs. I turn them into clean, searchable data in your records.

WhatsApp, Telegram and mobile daily entry

Supervisors and staff log production, stock in and out, and dispatch from their phone with a simple form or a photo. It lands in your records for you to check and confirm.

Invoicing and collections

Invoices drafted from dispatch slips or POs, with e-invoice and e-way bill details, sent after your approval and tracked until paid. A clear list of who owes what, with automatic reminders by email and WhatsApp.

Follow-up automation

Enquiries, quotes and customer follow-ups sent on time by WhatsApp and email, so no lead goes cold.

Business Pulse (automated MIS)

Every week: a report on your phone and email and a simple dashboard of sales, stock, dispatch and dues, including who your best customers are and who has gone quiet. Or start with a one-off report: three months of data, three decisions to act on this month.

Market and price tracking

Automatic checks of competitor prices, marketplace listings, tenders or supplier rates (public web data only), delivered to you as a daily or weekly sheet or alert.

Typical uses: automatic invoicing, payment reminders, document reading, MIS reports and dashboards, price and tender tracking.

What the monthly plan covers

Included in the monthly plan

- Hosting, backups and uptime monitoring.
- **Bug fixes:** anything that does not work the way the signed scope says. Critical issues (the system is down or blocks work) get a reply within 1 business day, everything else within 3 business days (Monday to Friday).
- Security and dependency updates.
- For the first 90 days after go-live: adjustments to what I built (not new features).
- After 90 days: small changes up to 3 hours a month. Unused hours do not roll over.

Not included, quoted or billed at cost

- New screens, reports, fields or modules.
- Changing how something works when it already works as agreed.
- New integrations (WhatsApp, payments, Tally and similar) and new third-party services.
- Anything beyond the 3 hours in a month. Bigger changes are quoted first, at a day rate of ₹10,000.

The simple test

If it doesn't work the way we agreed, I fix it free. If it works as agreed and you want it different, that's a change.

Third-party and usage costs (never in the monthly plan)

AI usage (models that read bills, invoices and POs, or answer messages): billed at cost as a separate line on the monthly bill. There is no free allowance. Every AI service is named in the scope before work starts.

WhatsApp Business API and similar messaging fees: billed at cost as separate lines. Most Indian businesses already work on WhatsApp, so that is the usual choice; Telegram or a simple portal work too, and we choose according to your use case.

Email or SMS sending services if reminders go out by those channels: at cost, named in the scope.

Every third-party service the build uses is named in the signed scope before work starts, with what it is used for and that it is billed at cost. A new one added later counts as a change and is quoted.

What moves the price

How many workflows, how many systems they connect, and whether they include AI steps. AI usage and WhatsApp messages are billed at cost on your monthly bill. AI is an add-on, suggested only where it's worth the cost.

Changes beyond the plan

Bigger changes are quoted before work starts at a day rate of ₹10,000. Illustration only: a change that takes one and a half days would be quoted at ₹15,000, plus GST. Small changes up to 3 hours a month are included after the first 90 days.

Pricing in detail

All prices are "from" prices and exclude GST (18%). Your own figures are agreed after scope.

The price at three project sizes

Bigger projects cost more to host and support, so the monthly plan rises more slowly than setup: if setup doubles, the monthly plan goes up by about 50%. The code price scales fully with setup; the maintenance plan follows the monthly plan. Figures are rounded to the nearest ₹1,000.

Size	Setup (one time)	Monthly plan	Own the code from about	Maintenance plan after buying	Owning from day one is cheaper after
From size	₹40,000	₹18,000/month	₹1,25,000	₹9,000/month	about 10 months
Mid-range	₹60,000	₹23,000/month	₹1,88,000	₹11,000/month	about 11 months
Top of the typical range	₹80,000	₹27,000/month	₹2,50,000	₹14,000/month	about 14 months

How setup is paid

Setup is paid in two parts: 50% at signing and 50% when it goes to live testing (the testing phase, when real users first start using it, before it goes fully live). The monthly plan starts at go-live, after live testing, and is invoiced monthly.

Size	At signing (50%)	At live testing (50%)	GST on setup (18%)	Setup including GST
From size	₹20,000	₹20,000	₹7,200	₹47,200
Mid-range	₹30,000	₹30,000	₹10,800	₹70,800
Top of the typical range	₹40,000	₹40,000	₹14,400	₹94,400

What the first year costs (monthly plan)

Size	Setup	12 monthly fees	Total before GST	GST (18%)	Total including GST
From size	₹40,000	₹2,16,000	₹2,56,000	₹46,080	₹3,02,080
Mid-range	₹60,000	₹2,76,000	₹3,36,000	₹60,480	₹3,96,480
Top of the typical range	₹80,000	₹3,24,000	₹4,04,000	₹72,720	₹4,76,720

Monthly fee with GST

Size	Monthly plan	GST	Monthly invoice
From size	₹18,000	₹3,240	₹21,240
Mid-range	₹23,000	₹4,140	₹27,140
Top of the typical range	₹27,000	₹4,860	₹31,860

Monthly plan or own the code

Two ways to pay for the same software. The monthly plan costs less up front and I host, maintain and support it. Owning the code means you receive the code as it stands on the day you buy and the monthly plan ends; hosting is then yours to run, or you can add a maintenance plan.

The rules

- ✓ The price of owning the code depends on your project and is agreed before you commit.
- ✓ **If you start on the monthly plan and buy later,** the setup you've paid is deducted and 50% of the monthly fees you've paid also count toward it.
- ✓ The price never goes below 25% of the agreed code price, so staying longer never makes the code free.
- ✓ You can buy at any time. After buying: a 30-day free bug-fix window after handover; hosting is yours to run, or add a maintenance plan (3-month minimum) that covers bug fixes, security updates and up to 3 hours of small changes a month. Problems caused by your own edits to the code are quoted separately.
- ✓ The reusable core of my platform stays licensed for your own business only. Your data is always yours.

Worked example

At the from size: a client with a ₹40,000 setup, a ₹18,000 monthly plan and a ₹1,25,000 code price who decides to buy the code after 4 months pays ₹1,25,000 − ₹40,000 − ₹36,000 = ₹49,000.

What it costs to buy the code after N months (starting on the monthly plan)

Size	After 3 months	6	9	12	18	24	Floor (25%) reached after
From size	₹58,000	₹31,250	₹31,250	₹31,250	₹31,250	₹31,250	6 months (₹31,250)
Mid-range	₹93,500	₹59,000	₹47,000	₹47,000	₹47,000	₹47,000	8 months (₹47,000)
Top of the typical range	₹1,29,500	₹89,000	₹62,500	₹62,500	₹62,500	₹62,500	8 months (₹62,500)

If you leave early

Inside the first 6 months you can end the monthly plan by paying two months' plan fees, or by buying the code. After 6 months: 30 days' notice, no exit fee. Either way: outstanding invoices are settled, setup already paid is not refunded, you get an export of your data within 30 days, and the accounts stay in your name.

Size	Two months' plan fees	Plus GST	Or: cost to buy the code at month 3
From size	₹36,000	₹42,480	₹58,000
Mid-range	₹46,000	₹54,280	₹93,500
Top of the typical range	₹54,000	₹63,720	₹1,29,500

Total paid over time: three routes

Size	After	Stay on the monthly plan	Start monthly, buy later	Own from day one	Cost to buy at that point
From size	6 months	**₹1,48,000**	₹1,79,250	₹1,79,000	₹31,250
	12 months	₹2,56,000	₹2,87,250	**₹2,33,000**	₹31,250
	24 months	₹4,72,000	₹5,03,250	**₹3,41,000**	₹31,250
	36 months	₹6,88,000	₹7,19,250	**₹4,49,000**	₹31,250
Mid-range	6 months	**₹1,98,000**	₹2,57,000	₹2,54,000	₹59,000
	12 months	₹3,36,000	₹3,83,000	**₹3,20,000**	₹47,000
	24 months	₹6,12,000	₹6,59,000	**₹4,52,000**	₹47,000
	36 months	₹8,88,000	₹9,35,000	**₹5,84,000**	₹47,000
Top of the typical range	6 months	**₹2,42,000**	₹3,31,000	₹3,34,000	₹89,000
	12 months	**₹4,04,000**	₹4,66,500	₹4,18,000	₹62,500
	24 months	₹7,28,000	₹7,90,500	**₹5,86,000**	₹62,500
	36 months	₹10,52,000	₹11,14,500	**₹7,54,000**	₹62,500

From size: setup ₹40,000, monthly ₹18,000, code price ₹1,25,000, maintenance ₹9,000. Owning from day one costs less than staying on the monthly plan after about 10 months (15 months once about ₹3,000 a month of your own hosting is counted).

Mid-range: setup ₹60,000, monthly ₹23,000, code price ₹1,88,000, maintenance ₹11,000. Owning from day one costs less than staying on the monthly plan after about 11 months (15 months once about ₹3,000 a month of your own hosting is counted).

Top of the typical range: setup ₹80,000, monthly ₹27,000, code price ₹2,50,000, maintenance ₹14,000. Owning from day one costs less than staying on the monthly plan after about 14 months (17 months once about ₹3,000 a month of your own hosting is counted).

The lowest total in each row is in bold. Starting monthly costs more in total if you later buy, in return for paying less up front and having me host and support it while you decide.

Total paid over 4 years, from size (setup ₹40,000, monthly ₹18,000)

How to read it: the higher a line, the more you have paid by then. The lowest line is the cheapest route.

Stay on the monthly plan = setup + months × monthly plan.

Start monthly, buy the code later = what you paid so far + the cost to buy at that point.

Own from day one = code price + months × maintenance plan. (You also pay for your own hosting, not included here.)

Examples

These are illustrations, not client case studies and not results. Sizes are examples; your quote follows scope.

Example 1: A manufacturer retyping dispatch slips into invoices

The situation. Dispatch slips and POs are typed into the billing system by hand, then typed again into the books. Invoices go out late and e-invoice and e-way bill details are filled in manually.

What I would build.

- ✓ Invoicing and collections: invoices drafted from dispatch slips or POs, e-invoice and e-way bill details prepared, sent to customers after your approval, and tracked until paid.
- ✓ Paper and documents to data: bills, invoices and POs read into clean data in your records.

Illustrative size. One workflow connecting one billing system: the smallest size.

Setup	₹40,000 (one time): ₹20,000 at signing, ₹20,000 at live testing
Monthly plan	₹18,000/month from go-live (6-month minimum)
First year	₹2,56,000 before GST (₹3,02,080 including GST)
Own the code instead	from about ₹1,25,000, quoted after scope; maintenance plan after buying ₹9,000/month
Buying later, after 12 months	₹31,250 on top of the ₹2,56,000 already paid
Own from day one is cheaper after	about 10 months

Example 2: A distributor chasing late payments

The situation. Nobody is sure who owes what. Reminders depend on someone remembering, and the owner finds out about overdue money from phone calls.

What I would build.

- ✓ Invoicing and collections: a clear list of who owes what, automatic payment reminders by email and WhatsApp, every payment tracked until it comes in.
- ✓ Business Pulse: a weekly report on your phone and email, plus a simple dashboard of sales, stock, dispatch and dues.

Illustrative size. Two workflows and a reporting dashboard, so a mid-sized project.

Setup	₹60,000 (one time): ₹30,000 at signing, ₹30,000 at live testing
Monthly plan	₹23,000/month from go-live (6-month minimum)
First year	₹3,36,000 before GST (₹3,96,480 including GST)
Own the code instead	from about ₹1,88,000, quoted after scope; maintenance plan after buying ₹11,000/month
Buying later, after 12 months	₹47,000 on top of the ₹3,36,000 already paid
Own from day one is cheaper after	about 11 months

Example 3: A factory logging production on paper and in chats

The situation. Supervisors write production and dispatch in registers or send it on WhatsApp. It is forgotten by evening, and the numbers arrive weeks later.

What I would build.

- ✓ Paper and documents to data: photos of registers, job cards and stock books become clean, searchable data.
- ✓ WhatsApp, Telegram and mobile daily entry: staff log production, stock in and out, and dispatch from their phone. It lands in your records to check and confirm.
- ✓ Business Pulse: weekly report and dashboard, with the few things that need attention flagged.

Illustrative size. Several workflows, daily entry from many people and a dashboard: the upper end of the typical range.

Setup	₹80,000 (one time): ₹40,000 at signing, ₹40,000 at live testing
Monthly plan	₹27,000/month from go-live (6-month minimum)
First year	₹4,04,000 before GST (₹4,76,720 including GST)
Own the code instead	from about ₹2,50,000, quoted after scope; maintenance plan after buying ₹14,000/month
Buying later, after 12 months	₹62,500 on top of the ₹4,04,000 already paid
Own from day one is cheaper after	about 14 months

How a project runs

01 **Fill out the form, then a free call or Google Meet.** Tell me which services you need. I reply by email or WhatsApp within 48 hours, and we set up a call where you walk me through how things work today, your budget and when you'd like to start. I'll tell you whether you need custom software at all, or whether a free product already does the same job.

02 **Discovery, then a written proposal in 5–7 days.** If you're in or around Raipur, I visit your office, shop or warehouse to see how work gets done and which software, sheets and apps you use. If you're further away, you walk me through it on a screen share. You work with me personally throughout, from this first look to launch, with no salesperson or middleman in between. Within 5–7 days of the visit or walkthrough you get a written proposal, free and with no obligation: how I understand your business, what the system will do, and the scope, price, timeline and payment schedule. It stays valid for 21 days, and the detailed design comes after you approve it. If you'd like a deeper analysis before deciding, the paid workflow audit gives you a written report you keep, whether or not we build.

03 **Prototype, then built in stages.** Once you approve the proposal and pay 50% of the setup fee, I work out the detailed design and build a prototype as the first milestone. Your team signs it off before the full build. For larger systems we start with one workflow and expand. You see a demo at each milestone, and changes within the agreed scope are included; new features are quoted separately. The other 50% is due when it goes to live testing.

04 **Launch and training.** I set it up and run a handover session so your team knows how to use it. If you need more, such as extra sessions or on-site training, it's quoted in your proposal.

05 **After go-live.** The monthly plan keeps it hosted, up and secure, with bug fixes. We review how it's being used at 60–90 days. After the first 90 days, small changes up to 3 hours a month are included; bigger changes are quoted. If you buy the code outright, you get 30 days of free bug fixes after handover; after that, hosting is yours to run, or a maintenance plan covers bug fixes, security updates and up to 3 hours of small changes a month.

Typical timeline: 4–16 weeks for the full build, counted from the day you've sent your data and approvals. Your proposal says exactly. I'll sign an NDA before we talk if you want one.

What I need from you

- ✓ Exports from your current tools (Excel or CSV files are enough; up to 3 source files are covered by setup, then quoted).
- ✓ One person on your side who owns it day to day. Automation only works when your team uses it.
- ✓ A dedicated WhatsApp Business number for your company, or Telegram or a simple portal if you prefer.
- ✓ Your approval at each stage: the system drafts, you check and confirm.

Terms in short

A plain-English summary of how we work together, not a contract.

- ✓ You pay a setup fee and a monthly plan. I host, maintain and support your software.
- ✓ Your data and your accounts are always yours. The code is yours when you buy it.
- ✓ Monthly plans have a 6-month minimum, with two ways to leave early.
- ✓ Small changes are included each month; bigger ones are quoted first.
- ✓ If I ever stop offering the service, the code and your data pass to you free.

Questions clients ask

Does this work with Tally or our billing software?

Usually, yes. I work with the exports your billing and accounting software already produces, such as Excel or CSV files, so you keep using what you have.

Will WhatsApp messages come from our own number?

Yes. I set up a dedicated WhatsApp Business number in your company's name, and reminders and updates go out from it. WhatsApp's message fees are billed at cost.

What is Business Pulse?

An automated MIS: a weekly report on your phone and email, plus a simple dashboard of sales, stock, dispatch and dues, with the few things that need your attention flagged and the customers who have gone quiet. If you'd rather start small, share three months of data for a one-off, one-page report with three decisions to act on.

Do you use AI, and is our data safe?

AI is used where it helps, such as reading bills and invoices, and its usage is billed at cost as a separate line. Access is limited by role and your data is backed up weekly.

Our team isn't very tech-savvy. Will this work for us?

Most likely. I keep the screens simple so teams pick them up quickly, and they work on a phone. A handover session is included in setup; extra or on-site training is quoted in your proposal. You'll need one person on your side who owns it day to day.

Do we have to replace our current software?

No. I usually work with the data your software already exports, like Excel or CSV files, so you keep what you use today.

Can you build an app for millions of users?

That's not what I focus on. I build systems for businesses and their teams, dealers and customers, from a handful of users up to typically 50,000 to 90,000 monthly active users. I can also build MVPs designed to grow to that size. I'm a one-person studio, and that focus keeps your costs predictable and lets me give each client proper attention. If you're building a mass-market consumer app, a larger team will serve you better, and I'm happy to point you to one.

Can I see a demo built for my business before committing?

Yes. I can build a working demo around your own process and data, so you see exactly how it would work for you. It's priced as a small share of the estimated project fee, confirmed once we've discussed the scope of work (SOW).

How quickly do you fix problems?

On working days (Monday to Friday), I reply to anything that stops your work within 1 business day, and to everything else within 3 business days.

What if you stop working on this?

If I ever stop offering the service, the code and your data pass to you free of charge, so your business is never stuck.

Who owns our data?

You do, always. If the plan ends, you get a full export of your data.

Are there other costs?

GST at 18% is added to all prices. AI usage and third-party services such as WhatsApp are billed at cost, as separate lines on your monthly bill. Every service your system uses is listed in the agreement before work starts, so nothing new appears later without your approval.

Thank you

Tell me what's slowing your business down.

Reply to sohamkar.work@gmail.com with a time that suits you, or fill out the form on my website. I reply by email or WhatsApp within 48 hours, and your written proposal comes after a free call.

I'll sign an NDA before we talk if you want one.
