Services and pricing guide

Custom business software

Your own ERP or CRM, built around how your business actually runs. No per-user fees.

Option 1 · Pay monthly

Monthly plan

Setup from ₹1,50,000 (one time) + ₹20,000/month

I host, maintain and support it. 6-month minimum.

Option 2 · Pay once

Buy outright

from about ₹2,50,000

Quoted after scope. Fees you've paid count toward it. After the purchase, hosting is yours to run, or you can add a maintenance plan from ₹10,000/month, with a 3-month minimum.

At a glance

Setup (one time)	from ₹1,50,000; typical range ₹1,50,000 to ₹2,50,000, agreed after scope
Monthly plan	from ₹20,000/month (6-month minimum)
Own the code	from about ₹2,50,000, quoted after scope
Maintenance plan after buying	from ₹10,000/month (3-month minimum)
Typical timeline	5–20 weeks, from the day you've sent your data and approvals
GST	18%, added to every invoice
Payment	setup in two parts (50% at signing, 50% at live testing); monthly plan invoiced monthly, UPI accepted

All prices are "from" prices, exclude GST (18%) and are not quotes. Your own figures are agreed after scope.

Add-on · AI, only where it's worth it

Not every system needs AI. Your orders, stock, ledgers and approvals run best on plain, predictable software. During discovery I'll suggest AI only where it saves your team real time and is worth its running cost for how much you'll use it. Quoted separately; AI usage is billed at cost.

Reading documents. Bills, invoices and POs read straight into the system, so nobody types them in.
Drafted quotes and messages. Quotes, follow-ups and summaries drafted from your data for your team to check and send.
Ask your data. Ask about orders, stock, dealers or customers in plain language and get an answer from your own records.

AI can make mistakes, including wrong or made-up answers, so I build it to suggest and draft, and your team checks before acting on it. I'm not responsible for its output or for decisions based on it.

What you get

Who it is for

- Businesses that have outgrown Excel sheets and WhatsApp groups
- Manufacturers tracking production, stock and dispatch across sheets and registers
- Distributors and brands managing dealers, agents or price tiers
- Teams paying per-user fees for software that doesn't fit
- Companies that need a tool for a job no product does well

Problems it solves

“Everything happens on WhatsApp, and nothing is recorded.”

Orders, production and dispatch get agreed in chats and are forgotten by evening.

“Our dealer or distributor network is hard to manage.”

Price lists, orders and ledgers live in different places, and every dealer question turns into a phone call.

“Every tool we try makes us change how we work.”

Off-the-shelf software forces its own process on your business, and your team stops using it.

“We don’t know our real numbers until it’s too late.”

Sales, stock and dues sit in different sheets and different heads, so you find out what happened long after it could have helped.

What I build

ERP

Orders, stock, production, purchase and dispatch in one system, linked to Tally, so everyone works from the same numbers.

CRM

Leads, quotes, follow-ups and each customer's full history in one place, so your sales team knows whom to call and what was promised.

Dealer and distributor platform (Distribution OS)

One platform for dealers, distributors or agents: price tiers, orders, ledgers, payments and an online shop. Add a mobile app so your dealers can order from their phone.

Custom tools

Something specific to your business? I build internal portals, calculators and quoting tools, and admin dashboards around how you already work.

Every system includes

Role-based login. Each person sees only what their role allows.
Admin dashboard. Users, settings and reports in one place.
Phone and desktop. Works in the browser on both, with nothing to install.
Backups and export. Weekly backups, and a full export of your data if the plan ends.

Typical uses: ERP, CRM, dealer and distributor platforms, internal portals, calculators and quoting tools, admin dashboards.

What the monthly plan covers

Included in the monthly plan

- Hosting, backups and uptime monitoring.
- **Bug fixes:** anything that does not work the way the signed scope says. Critical issues (the system is down or blocks work) get a reply within 1 business day, everything else within 3 business days (Monday to Friday).
- Security and dependency updates.
- For the first 90 days after go-live: adjustments to what I built (not new features).
- After 90 days: small changes up to 3 hours a month. Unused hours do not roll over.

Not included, quoted or billed at cost

- New screens, reports, fields or modules.
- Changing how something works when it already works as agreed.
- New integrations (WhatsApp, payments, Tally and similar) and new third-party services.
- Anything beyond the 3 hours in a month. Bigger changes are quoted first, at a day rate of ₹10,000.

The simple test

If it doesn't work the way we agreed, I fix it free. If it works as agreed and you want it different, that's a change.

Third-party and usage costs (never in the monthly plan)

Payment gateway fees (for online orders and dealer payments): charged by the gateway; billed at cost or paid directly through your own gateway account, which is created in your business's name.

SMS, email and WhatsApp sending fees if the system sends them: at cost as separate lines, named in the scope.

Domain and any paid maps or third-party APIs in your business's name or at cost, named in the scope.

Integrations such as Tally: scoped before work starts. A new integration added later is a change and is quoted.

AI usage (only if the AI add-on is used): billed at cost as a separate line on the monthly bill, and named in the scope before work starts.

Every third-party service the build uses is named in the signed scope before work starts, with what it is used for and that it is billed at cost. A new one added later counts as a change and is quoted.

What moves the price

Which modules you need, integrations such as Tally or payments, and how much data I move from your old system. No per-user charges; typically built for 50,000 to 90,000 monthly active users.

Changes beyond the plan

Bigger changes are quoted before work starts at a day rate of ₹10,000. Illustration only: a change that takes one and a half days would be quoted at ₹15,000, plus GST. Small changes up to 3 hours a month are included after the first 90 days.

Pricing in detail

All prices are "from" prices and exclude GST (18%). Your own figures are agreed after scope.

The price at three project sizes

Bigger projects cost more to host and support, so the monthly plan rises more slowly than setup: if setup doubles, the monthly plan goes up by about 50%. The code price scales fully with setup; the maintenance plan follows the monthly plan. Figures are rounded to the nearest ₹1,000.

Size	Setup (one time)	Monthly plan	Own the code from about	Maintenance plan after buying	Owning from day one is cheaper after
From size	₹1,50,000	₹20,000/month	₹2,50,000	₹10,000/month	about 10 months
Mid-range	₹2,00,000	₹23,000/month	₹3,33,000	₹12,000/month	about 13 months
Top of the typical range	₹2,50,000	₹27,000/month	₹4,17,000	₹13,000/month	about 12 months

How setup is paid

Setup is paid in two parts: 50% at signing and 50% when it goes to live testing (the testing phase, when real users first start using it, before it goes fully live). The monthly plan starts at go-live, after live testing, and is invoiced monthly.

Size	At signing (50%)	At live testing (50%)	GST on setup (18%)	Setup including GST
From size	₹75,000	₹75,000	₹27,000	₹1,77,000
Mid-range	₹1,00,000	₹1,00,000	₹36,000	₹2,36,000
Top of the typical range	₹1,25,000	₹1,25,000	₹45,000	₹2,95,000

What the first year costs (monthly plan)

Size	Setup	12 monthly fees	Total before GST	GST (18%)	Total including GST
From size	₹1,50,000	₹2,40,000	₹3,90,000	₹70,200	₹4,60,200
Mid-range	₹2,00,000	₹2,76,000	₹4,76,000	₹85,680	₹5,61,680
Top of the typical range	₹2,50,000	₹3,24,000	₹5,74,000	₹1,03,320	₹6,77,320

Monthly fee with GST

Size	Monthly plan	GST	Monthly invoice
From size	₹20,000	₹3,600	₹23,600
Mid-range	₹23,000	₹4,140	₹27,140
Top of the typical range	₹27,000	₹4,860	₹31,860

Monthly plan or own the code

Two ways to pay for the same software. The monthly plan costs less up front and I host, maintain and support it. Owning the code means you receive the code as it stands on the day you buy and the monthly plan ends; hosting is then yours to run, or you can add a maintenance plan.

The rules

- ✓ The price of owning the code depends on your project and is agreed before you commit.
- ✓ **If you start on the monthly plan and buy later,** the setup you've paid is deducted and 50% of the monthly fees you've paid also count toward it.
- ✓ The price never goes below 25% of the agreed code price, so staying longer never makes the code free.
- ✓ You can buy at any time. After buying: a 30-day free bug-fix window after handover; hosting is yours to run, or add a maintenance plan (3-month minimum) that covers bug fixes, security updates and up to 3 hours of small changes a month. Problems caused by your own edits to the code are quoted separately.
- ✓ The reusable core of my platform stays licensed for your own business only. Your data is always yours.

Worked example

At the from size: a client with a ₹1,50,000 setup, a ₹20,000 monthly plan and a ₹2,50,000 code price who decides to buy the code after 4 months pays ₹2,50,000 − ₹1,50,000 − ₹40,000 = ₹60,000, which is below the 25% floor of ₹62,500, so the price is ₹62,500.

What it costs to buy the code after N months (starting on the monthly plan)

Size	After 3 months	6	9	12	18	24	Floor (25%) reached after
From size	₹70,000	₹62,500	₹62,500	₹62,500	₹62,500	₹62,500	4 months (₹62,500)
Mid-range	₹98,500	₹83,250	₹83,250	₹83,250	₹83,250	₹83,250	5 months (₹83,250)
Top of the typical range	₹1,26,500	₹1,04,250	₹1,04,250	₹1,04,250	₹1,04,250	₹1,04,250	5 months (₹1,04,250)

If you leave early

Inside the first 6 months you can end the monthly plan by paying two months' plan fees, or by buying the code. After 6 months: 30 days' notice, no exit fee. Either way: outstanding invoices are settled, setup already paid is not refunded, you get an export of your data within 30 days, and the accounts stay in your name.

Size	Two months' plan fees	Plus GST	Or: cost to buy the code at month 3
From size	₹40,000	₹47,200	₹70,000
Mid-range	₹46,000	₹54,280	₹98,500
Top of the typical range	₹54,000	₹63,720	₹1,26,500

Total paid over time: three routes

Size	After	Stay on the monthly plan	Start monthly, buy later	Own from day one	Cost to buy at that point
From size	6 months	**₹2,70,000**	₹3,32,500	₹3,10,000	₹62,500
	12 months	₹3,90,000	₹4,52,500	**₹3,70,000**	₹62,500
	24 months	₹6,30,000	₹6,92,500	**₹4,90,000**	₹62,500
	36 months	₹8,70,000	₹9,32,500	**₹6,10,000**	₹62,500
Mid-range	6 months	**₹3,38,000**	₹4,21,250	₹4,05,000	₹83,250
	12 months	**₹4,76,000**	₹5,59,250	₹4,77,000	₹83,250
	24 months	₹7,52,000	₹8,35,250	**₹6,21,000**	₹83,250
	36 months	₹10,28,000	₹11,11,250	**₹7,65,000**	₹83,250
Top of the typical range	6 months	**₹4,12,000**	₹5,16,250	₹4,95,000	₹1,04,250
	12 months	₹5,74,000	₹6,78,250	**₹5,73,000**	₹1,04,250
	24 months	₹8,98,000	₹10,02,250	**₹7,29,000**	₹1,04,250
	36 months	₹12,22,000	₹13,26,250	**₹8,85,000**	₹1,04,250

From size: setup ₹1,50,000, monthly ₹20,000, code price ₹2,50,000, maintenance ₹10,000. Owning from day one costs less than staying on the monthly plan after about 10 months (15 months once about ₹3,000 a month of your own hosting is counted).

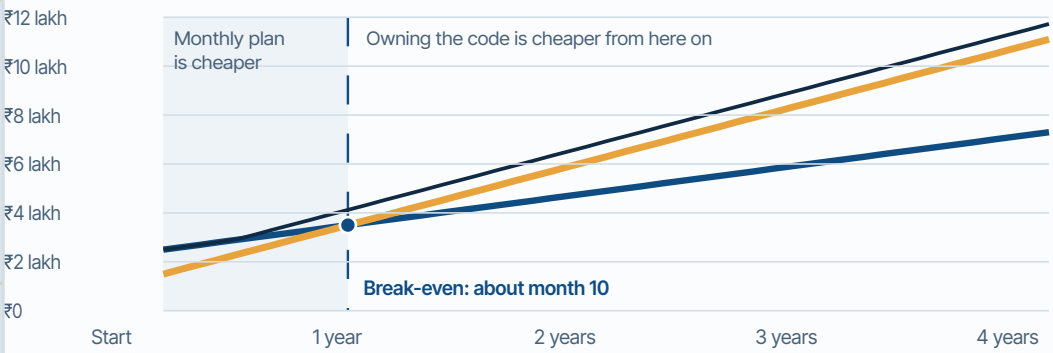

Mid-range: setup ₹2,00,000, monthly ₹23,000, code price ₹3,33,000, maintenance ₹12,000. Owning from day one costs less than staying on the monthly plan after about 13 months (17 months once about ₹3,000 a month of your own hosting is counted).

Top of the typical range: setup ₹2,50,000, monthly ₹27,000, code price ₹4,17,000, maintenance ₹13,000. Owning from day one costs less than staying on the monthly plan after about 12 months (16 months once about ₹3,000 a month of your own hosting is counted).

The lowest total in each row is in bold. Starting monthly costs more in total if you later buy, in return for paying less up front and having me host and support it while you decide.

Total paid over 4 years, from size (setup ₹1,50,000, monthly ₹20,000)

How to read it: the higher a line, the more you have paid by then. The lowest line is the cheapest route.

Stay on the monthly plan = setup + months × monthly plan.

Start monthly, buy the code later = what you paid so far + the cost to buy at that point.

Own from day one = code price + months × maintenance plan. (You also pay for your own hosting, not included here.)

Examples

These are illustrations, not client case studies and not results. Sizes are examples; your quote follows scope.

Example 1: A distributor whose dealers order by phone

The situation. Price lists, orders and ledgers live in different places, and every dealer question turns into a phone call.

What I would build.

- ✓ Dealer and distributor platform (Distribution OS): accounts for dealers, distributors and agents; price tiers, orders and ledgers; payments and an online shop.

Illustrative size. One focused platform with the standard modules: the smallest size.

Setup	₹1,50,000 (one time): ₹75,000 at signing, ₹75,000 at live testing
Monthly plan	₹20,000/month from go-live (6-month minimum)
First year	₹3,90,000 before GST (₹4,60,200 including GST)
Own the code instead	from about ₹2,50,000, quoted after scope; maintenance plan after buying ₹10,000/month
Buying later, after 12 months	₹62,500 on top of the ₹3,90,000 already paid
Own from day one is cheaper after	about 10 months

Example 2: A manufacturer running on sheets and registers

The situation. Orders, production, stock and dispatch are tracked in separate Excel sheets and paper registers, so nobody knows what's in stock or what's running late until someone checks by hand.

What I would build.

- ✓ ERP: orders, stock, production, purchase and dispatch in one system, linked to Tally.
- ✓ Role-based logins for the office, the floor and the owner, with an admin dashboard.

Illustrative size. Several connected modules and a data move from sheets: a mid-sized project.

Setup	₹2,00,000 (one time): ₹1,00,000 at signing, ₹1,00,000 at live testing
Monthly plan	₹23,000/month from go-live (6-month minimum)
First year	₹4,76,000 before GST (₹5,61,680 including GST)
Own the code instead	from about ₹3,33,000, quoted after scope; maintenance plan after buying ₹12,000/month
Buying later, after 12 months	₹83,250 on top of the ₹4,76,000 already paid
Own from day one is cheaper after	about 13 months

Example 3: A company that stopped using off-the-shelf software

The situation. The CRM they paid for per user forced its own process on the sales team, so everyone went back to sheets and chats.

What I would build.

- ✓ CRM: leads, quotes, follow-ups and each customer's full history, built around how the sales team already works.
- ✓ Quoting tools and calculators on the same data, plus an admin dashboard.

Illustrative size. Several modules, a data move from the old system and integrations: the upper end of the typical range.

Setup	₹2,50,000 (one time): ₹1,25,000 at signing, ₹1,25,000 at live testing
Monthly plan	₹27,000/month from go-live (6-month minimum)
First year	₹5,74,000 before GST (₹6,77,320 including GST)
Own the code instead	from about ₹4,17,000, quoted after scope; maintenance plan after buying ₹13,000/month
Buying later, after 12 months	₹1,04,250 on top of the ₹5,74,000 already paid
Own from day one is cheaper after	about 12 months

How a project runs

01 **Fill out the form, then a free call or Google Meet.** Tell me which services you need. I reply by email or WhatsApp within 48 hours, and we set up a call where you walk me through how things work today, your budget and when you'd like to start. I'll tell you whether you need custom software at all, or whether a free product already does the same job.

02 **Discovery, then a written proposal in 5–7 days.** If you're in or around Raipur, I visit your office, shop or warehouse to see how work gets done and which software, sheets and apps you use. If you're further away, you walk me through it on a screen share. You work with me personally throughout, from this first look to launch, with no salesperson or middleman in between. Within 5–7 days of the visit or walkthrough you get a written proposal, free and with no obligation: how I understand your business, what the system will do, and the scope, price, timeline and payment schedule. It stays valid for 21 days, and the detailed design comes after you approve it. If you'd like a deeper analysis before deciding, the paid workflow audit gives you a written report you keep, whether or not we build.

03 **Prototype, then built in stages.** Once you approve the proposal and pay 50% of the setup fee, I work out the detailed design and build a prototype as the first milestone. Your team signs it off before the full build. For larger systems we start with one workflow and expand. You see a demo at each milestone, and changes within the agreed scope are included; new features are quoted separately. The other 50% is due when it goes to live testing.

04 **Launch and training.** I set it up and run a handover session so your team knows how to use it. If you need more, such as extra sessions or on-site training, it's quoted in your proposal.

05 **After go-live.** The monthly plan keeps it hosted, up and secure, with bug fixes. We review how it's being used at 60–90 days. After the first 90 days, small changes up to 3 hours a month are included; bigger changes are quoted. If you buy the code outright, you get 30 days of free bug fixes after handover; after that, hosting is yours to run, or a maintenance plan covers bug fixes, security updates and up to 3 hours of small changes a month.

Typical timeline: 5–20 weeks for the full build, counted from the day you've sent your data and approvals. Your proposal says exactly. I'll sign an NDA before we talk if you want one.

What I need from you

- ✓ Exports of the data you already have (Excel or CSV files, or exports from your billing and accounting software). Up to 3 source files are covered by setup; more are quoted.
- ✓ One person who owns the project on your side and signs off the prototype.
- ✓ The list of modules, price tiers, roles and approvals as they work today. I map these with you before the quote.
- ✓ For larger systems we start with one workflow and expand.

Terms in short

A plain-English summary of how we work together, not a contract.

- ✓ You pay a setup fee and a monthly plan. I host, maintain and support your software.
- ✓ Your data and your accounts are always yours. The code is yours when you buy it.
- ✓ Monthly plans have a 6-month minimum, with two ways to leave early.
- ✓ Small changes are included each month; bigger ones are quoted first.
- ✓ If I ever stop offering the service, the code and your data pass to you free.

Questions clients ask

Why custom software instead of an off-the-shelf product?

When a product fits your process, I'll tell you to use it. Custom software makes sense when a product forces its own process on you, charges per user, or can't handle your pricing, approvals or reports.

Can you move our existing data in?

Yes. Setup includes moving your existing records in from up to 3 source files, such as Excel sheets or software exports. More are quoted.

Can it connect to Tally or a payment gateway?

Yes. Integrations such as Tally or payments are scoped and priced in your proposal.

Can we start small?

Yes. For larger systems we start with one workflow, then expand once your team is using it.

How is this different from Zoho, Tally or a ready-made ERP?

Tally stays your accounting system, and the software I build works alongside it. Ready-made ERPs and CRMs like Zoho suit businesses whose process matches theirs, and charge for every user. A custom system follows your own pricing, approvals and reports, with no per-user fees.

Are we locked in to you?

No. Your data is yours, with a full export if the plan ends. You can buy the source code outright at any time, and if I ever stop offering the service, the code and your data pass to you free of charge.

Our team isn't very tech-savvy. Will this work for us?

Most likely. I keep the screens simple so teams pick them up quickly, and they work on a phone. A handover session is included in setup; extra or on-site training is quoted in your proposal. You'll need one person on your side who owns it day to day.

Do we have to replace our current software?

No. I usually work with the data your software already exports, like Excel or CSV files, so you keep what you use today.

Questions clients ask (continued)

Can you build an app for millions of users?

That's not what I focus on. I build systems for businesses and their teams, dealers and customers, from a handful of users up to typically 50,000 to 90,000 monthly active users. I can also build MVPs designed to grow to that size. I'm a one-person studio, and that focus keeps your costs predictable and lets me give each client proper attention. If you're building a mass-market consumer app, a larger team will serve you better, and I'm happy to point you to one.

Can I see a demo built for my business before committing?

Yes. I can build a working demo around your own process and data, so you see exactly how it would work for you. It's priced as a small share of the estimated project fee, confirmed once we've discussed the scope of work (SOW).

How quickly do you fix problems?

On working days (Monday to Friday), I reply to anything that stops your work within 1 business day, and to everything else within 3 business days.

What if you stop working on this?

If I ever stop offering the service, the code and your data pass to you free of charge, so your business is never stuck.

Who owns our data?

You do, always. If the plan ends, you get a full export of your data.

Are there other costs?

GST at 18% is added to all prices. AI usage and third-party services such as WhatsApp are billed at cost, as separate lines on your monthly bill. Every service your system uses is listed in the agreement before work starts, so nothing new appears later without your approval.

Thank you

Tell me what's slowing your business down.
