Services and pricing guide

Mobile apps

Android and iPhone apps for your team, suppliers and buyers, built once for both.

Option 1 · Pay monthly

Monthly plan

Setup from ₹60,000 (one time) + ₹15,000/month

I host, maintain and support it. 6-month minimum.

Option 2 · Pay once

Buy outright

from about ₹1,25,000

Quoted after scope. Fees you've paid count toward it. After the purchase, hosting is yours to run, or you can add a maintenance plan from ₹7,500/month, with a 3-month minimum.

At a glance

Setup (one time)	from ₹60,000; typical range ₹60,000 to ₹1,50,000, agreed after scope
Monthly plan	from ₹15,000/month (6-month minimum)
Own the code	from about ₹1,25,000, quoted after scope
Maintenance plan after buying	from ₹7,500/month (3-month minimum)
Typical timeline	4–12 weeks, from the day you've sent your data and approvals
GST	18%, added to every invoice
Payment	setup in two parts (50% at signing, 50% at live testing); monthly plan invoiced monthly, UPI accepted

All prices are "from" prices, exclude GST (18%) and are not quotes. Your own figures are agreed after scope.

Add-on · AI, only where it's worth it

Not every app needs AI. Most screens work best as plain, fast forms and lists. During discovery I'll suggest AI only where it makes the app easier to use and is worth its running cost for how much it'll be used. Quoted separately; AI usage is billed at cost.

Snap and fill. Take a photo of a bill, label or order slip, and the app fills in the form.
Smart search. Buyers and staff find products, suppliers or past orders by describing what they need.
In-app assistant. Answers common questions from your catalog, policies and order status, any time of day.

AI can make mistakes, including wrong or made-up answers, so I build it to suggest and fill in, and people check before it counts. I'm not responsible for its output or for decisions based on it.

What you get

Who it is for

- Businesses whose purchase requests and approvals run on calls, chats and paper
- Manufacturers and distributors whose B2B buyers order again and again
- Teams spread across sites who need projects and updates in one place
- Businesses that send invoices, pay vendors and chase payments every week
- Founders who need a first version (MVP) that can grow

Problems it solves

"We type the same data again and again."

Dispatch slips become invoices, POs go into your system, bills go into your books. All by hand.

"Everything happens on WhatsApp, and nothing is recorded."

Orders, production and dispatch get agreed in chats and are forgotten by evening.

"Our dealer or distributor network is hard to manage."

Price lists, orders and ledgers live in different places, and every dealer question turns into a phone call.

"Payments always come in late."

Chasing money is awkward and easy to forget, so it stays with your customers longer than it should.

What I build

Procurement apps

Supplier search, purchase requisitions and approvals from the phone, with every request recorded.

B2B eCommerce apps

Your buyers browse the catalog, reorder in a few taps and check their account, ledger and order status.

Collaboration and companion apps

Projects, tasks and team communication in one place, plus companion apps for the systems I build, so your team can use them on the go.

Mobile payment apps

Send invoices, pay vendors and collect payments from the phone, with every payment tracked.

Every app includes

Android and iPhone. Built once, released on both.
Admin dashboard. A web panel for your team to manage users, data and orders.
Secure login. Each person sees only what their role allows.
Store publishing. On the Play Store and App Store, under your business's name.

Typical uses: Procurement apps, B2B eCommerce apps, Collaboration & companion apps, Mobile payment apps.

What the monthly plan covers

Included in the monthly plan

- Hosting, backups and uptime monitoring.
- **Bug fixes:** anything that does not work the way the signed scope says. Critical issues (the system is down or blocks work) get a reply within 1 business day, everything else within 3 business days (Monday to Friday).
- Security and dependency updates.
- For the first 90 days after go-live: adjustments to what I built (not new features).
- After 90 days: small changes up to 3 hours a month. Unused hours do not roll over.

Not included, quoted or billed at cost

- New screens, reports, fields or modules.
- Changing how something works when it already works as agreed.
- New integrations (WhatsApp, payments, Tally and similar) and new third-party services.
- Anything beyond the 3 hours in a month. Bigger changes are quoted first, at a day rate of ₹10,000.

The simple test

If it doesn't work the way we agreed, I fix it free. If it works as agreed and you want it different, that's a change.

Third-party and usage costs (never in the monthly plan)

Play Store and App Store developer accounts are created in your business's name, and you pay the fees directly to Google and Apple: a one-time fee of about ₹2,400 for Google Play and about ₹9,000 a year for Apple.

Push notifications, SMS, email, maps and payment gateway fees if the app uses them: billed at cost as separate lines, named in the scope.

OTP login, if you opt for it: the DLT registration needed to send SMS in India and the SMS or WhatsApp message charges are paid by you.

Domain and backend hosting are part of the monthly plan's hosting; third-party usage fees are not. If you buy the code outright, the server and backend hosting are yours to run and pay for, or add a maintenance plan.

Every third-party service the build uses is named in the signed scope before work starts, with what it is used for and that it is billed at cost. A new one added later counts as a change and is quoted.

What moves the price

Number of screens and user roles, payments, the admin panel, and integrations with your other systems.

Changes beyond the plan

Bigger changes are quoted before work starts at a day rate of ₹10,000. Illustration only: a change that takes one and a half days would be quoted at ₹15,000, plus GST. Small changes up to 3 hours a month are included after the first 90 days.

Pricing in detail

All prices are "from" prices and exclude GST (18%). Your own figures are agreed after scope.

The price at three project sizes

Bigger projects cost more to host and support, so the monthly plan rises more slowly than setup: if setup doubles, the monthly plan goes up by about 50%. The code price scales fully with setup; the maintenance plan follows the monthly plan. Figures are rounded to the nearest ₹1,000.

Size	Setup (one time)	Monthly plan	Own the code from about	Maintenance plan after buying	Owning from day one is cheaper after
From size	₹60,000	₹15,000/month	₹1,25,000	₹7,500/month	about 9 months
Mid-range	₹1,05,000	₹21,000/month	₹2,19,000	₹10,000/month	about 11 months
Top of the typical range	₹1,50,000	₹26,000/month	₹3,13,000	₹13,000/month	about 13 months

How setup is paid

Setup is paid in two parts: 50% at signing and 50% when it goes to live testing (the testing phase, when real users first start using it, before it goes fully live). The monthly plan starts at go-live, after live testing, and is invoiced monthly.

Size	At signing (50%)	At live testing (50%)	GST on setup (18%)	Setup including GST
From size	₹30,000	₹30,000	₹10,800	₹70,800
Mid-range	₹52,500	₹52,500	₹18,900	₹1,23,900
Top of the typical range	₹75,000	₹75,000	₹27,000	₹1,77,000

What the first year costs (monthly plan)

Size	Setup	12 monthly fees	Total before GST	GST (18%)	Total including GST
From size	₹60,000	₹1,80,000	₹2,40,000	₹43,200	₹2,83,200
Mid-range	₹1,05,000	₹2,52,000	₹3,57,000	₹64,260	₹4,21,260
Top of the typical range	₹1,50,000	₹3,12,000	₹4,62,000	₹83,160	₹5,45,160

Monthly fee with GST

Size	Monthly plan	GST	Monthly invoice
From size	₹15,000	₹2,700	₹17,700
Mid-range	₹21,000	₹3,780	₹24,780
Top of the typical range	₹26,000	₹4,680	₹30,680

Monthly plan or own the code

Two ways to pay for the same software. The monthly plan costs less up front and I host, maintain and support it. Owning the code means you receive the code as it stands on the day you buy and the monthly plan ends; hosting is then yours to run, or you can add a maintenance plan.

The rules

- ✓ The price of owning the code depends on your project and is agreed before you commit.
- ✓ **If you start on the monthly plan and buy later,** the setup you've paid is deducted and 50% of the monthly fees you've paid also count toward it.
- ✓ The price never goes below 25% of the agreed code price, so staying longer never makes the code free.
- ✓ You can buy at any time. After buying: a 30-day free bug-fix window after handover; hosting is yours to run, or add a maintenance plan (3-month minimum) that covers bug fixes, security updates and up to 3 hours of small changes a month. Problems caused by your own edits to the code are quoted separately.
- ✓ The reusable core of my platform stays licensed for your own business only. Your data is always yours.

Worked example

At the from size: a client with a ₹60,000 setup, a ₹15,000 monthly plan and a ₹1,25,000 code price who decides to buy the code after 4 months pays ₹1,25,000 − ₹60,000 − ₹30,000 = ₹35,000.

What it costs to buy the code after N months (starting on the monthly plan)

Size	After 3 months	6	9	12	18	24	Floor (25%) reached after
From size	₹42,500	₹31,250	₹31,250	₹31,250	₹31,250	₹31,250	5 months (₹31,250)
Mid-range	₹82,500	₹54,750	₹54,750	₹54,750	₹54,750	₹54,750	6 months (₹54,750)
Top of the typical range	₹1,24,000	₹85,000	₹78,250	₹78,250	₹78,250	₹78,250	7 months (₹78,250)

If you leave early

Inside the first 6 months you can end the monthly plan by paying two months' plan fees, or by buying the code. After 6 months: 30 days' notice, no exit fee. Either way: outstanding invoices are settled, setup already paid is not refunded, you get an export of your data within 30 days, and the accounts stay in your name.

Size	Two months' plan fees	Plus GST	Or: cost to buy the code at month 3
From size	₹30,000	₹35,400	₹42,500
Mid-range	₹42,000	₹49,560	₹82,500
Top of the typical range	₹52,000	₹61,360	₹1,24,000

Total paid over time: three routes

Size	After	Stay on the monthly plan	Start monthly, buy later	Own from day one	Cost to buy at that point
From size	6 months	**₹1,50,000**	₹1,81,250	₹1,70,000	₹31,250
	12 months	₹2,40,000	₹2,71,250	**₹2,15,000**	₹31,250
	24 months	₹4,20,000	₹4,51,250	**₹3,05,000**	₹31,250
	36 months	₹6,00,000	₹6,31,250	**₹3,95,000**	₹31,250
Mid-range	6 months	**₹2,31,000**	₹2,85,750	₹2,79,000	₹54,750
	12 months	₹3,57,000	₹4,11,750	**₹3,39,000**	₹54,750
	24 months	₹6,09,000	₹6,63,750	**₹4,59,000**	₹54,750
	36 months	₹8,61,000	₹9,15,750	**₹5,79,000**	₹54,750
Top of the typical range	6 months	**₹3,06,000**	₹3,91,000	₹3,91,000	₹85,000
	12 months	**₹4,62,000**	₹5,40,250	₹4,69,000	₹78,250
	24 months	₹7,74,000	₹8,52,250	**₹6,25,000**	₹78,250
	36 months	₹10,86,000	₹11,64,250	**₹7,81,000**	₹78,250

From size: setup ₹60,000, monthly ₹15,000, code price ₹1,25,000, maintenance ₹7,500. Owning from day one costs less than staying on the monthly plan after about 9 months (15 months once about ₹3,000 a month of your own hosting is counted).

Mid-range: setup ₹1,05,000, monthly ₹21,000, code price ₹2,19,000, maintenance ₹10,000. Owning from day one costs less than staying on the monthly plan after about 11 months (15 months once about ₹3,000 a month of your own hosting is counted).

Top of the typical range: setup ₹1,50,000, monthly ₹26,000, code price ₹3,13,000, maintenance ₹13,000. Owning from day one costs less than staying on the monthly plan after about 13 months (17 months once about ₹3,000 a month of your own hosting is counted).

The lowest total in each row is in bold. Starting monthly costs more in total if you later buy, in return for paying less up front and having me host and support it while you decide.

Total paid over 4 years, from size (setup ₹60,000, monthly ₹15,000)

How to read it: the higher a line, the more you have paid by then. The lowest line is the cheapest route.

Stay on the monthly plan = setup + months × monthly plan.

Start monthly, buy the code later = what you paid so far + the cost to buy at that point.

Own from day one = code price + months × maintenance plan. (You also pay for your own hosting, not included here.)

Examples

These are illustrations, not client case studies and not results. Sizes are examples; your quote follows scope.

Example 1: A procurement app for purchase requests and approvals

The situation. Purchase requests come in by phone and WhatsApp, approvals wait on one person, and nobody can see what has been ordered.

What I would build.

- ✓ Procurement app: supplier search, requisitions and approvals from the phone, with every request recorded.
- ✓ An admin dashboard and secure login, published to the Play Store and App Store.

Illustrative size. One workflow and a handful of screens: the smallest size.

Setup	₹60,000 (one time): ₹30,000 at signing, ₹30,000 at live testing
Monthly plan	₹15,000/month from go-live (6-month minimum)
First year	₹2,40,000 before GST (₹2,83,200 including GST)
Own the code instead	from about ₹1,25,000, quoted after scope; maintenance plan after buying ₹7,500/month
Buying later, after 12 months	₹31,250 on top of the ₹2,40,000 already paid
Own from day one is cheaper after	about 9 months

Example 2: A B2B ordering app for dealers and buyers

The situation. Buyers phone in repeat orders and keep asking for price lists, balances and order status.

What I would build.

- ✓ B2B eCommerce app: catalog browsing, reordering and account management.
- ✓ An admin dashboard for your team, secure login and publishing to both stores.

Illustrative size. Two roles, a catalog and ledgers: a mid-sized project.

Setup	₹1,05,000 (one time): ₹52,500 at signing, ₹52,500 at live testing
Monthly plan	₹21,000/month from go-live (6-month minimum)
First year	₹3,57,000 before GST (₹4,21,260 including GST)
Own the code instead	from about ₹2,19,000, quoted after scope; maintenance plan after buying ₹10,000/month
Buying later, after 12 months	₹54,750 on top of the ₹3,57,000 already paid
Own from day one is cheaper after	about 11 months

Example 3: A payments app for invoicing, vendor payments and collections

The situation. Invoices go out late, vendor payments are tracked in a notebook, and collections depend on phone calls.

What I would build.

- ✓ Mobile payment app: invoicing, vendor payments and collections, with every payment tracked.
- ✓ An admin dashboard, a payment gateway and integrations with your other systems, published to both stores.

Illustrative size. Several roles, payments and integrations: the upper end of the typical range.

Setup	₹1,50,000 (one time): ₹75,000 at signing, ₹75,000 at live testing
Monthly plan	₹26,000/month from go-live (6-month minimum)
First year	₹4,62,000 before GST (₹5,45,160 including GST)
Own the code instead	from about ₹3,13,000, quoted after scope; maintenance plan after buying ₹13,000/month
Buying later, after 12 months	₹78,250 on top of the ₹4,62,000 already paid
Own from day one is cheaper after	about 13 months

How a project runs

01 **Fill out the form, then a free call or Google Meet.** Tell me which services you need. I reply by email or WhatsApp within 48 hours, and we set up a call where you walk me through how things work today, your budget and when you'd like to start. I'll tell you whether you need custom software at all, or whether a free product already does the same job.

02 **Discovery, then a written proposal in 5–7 days.** If you're in or around Raipur, I visit your office, shop or warehouse to see how work gets done and which software, sheets and apps you use. If you're further away, you walk me through it on a screen share. You work with me personally throughout, from this first look to launch, with no salesperson or middleman in between. Within 5–7 days of the visit or walkthrough you get a written proposal, free and with no obligation: how I understand your business, what the system will do, and the scope, price, timeline and payment schedule. It stays valid for 21 days, and the detailed design comes after you approve it. If you'd like a deeper analysis before deciding, the paid workflow audit gives you a written report you keep, whether or not we build.

03 **Prototype, then built in stages.** Once you approve the proposal and pay 50% of the setup fee, I work out the detailed design and build a prototype as the first milestone. Your team signs it off before the full build. For larger systems we start with one workflow and expand. You see a demo at each milestone, and changes within the agreed scope are included; new features are quoted separately. The other 50% is due when it goes to live testing.

04 **Launch and training.** I set it up and run a handover session so your team knows how to use it. If you need more, such as extra sessions or on-site training, it's quoted in your proposal.

05 **After go-live.** The monthly plan keeps it hosted, up and secure, with bug fixes. We review how it's being used at 60–90 days. After the first 90 days, small changes up to 3 hours a month are included; bigger changes are quoted. If you buy the code outright, you get 30 days of free bug fixes after handover; after that, hosting is yours to run, or a maintenance plan covers bug fixes, security updates and up to 3 hours of small changes a month.

Typical timeline: 4–12 weeks for the full build, counted from the day you've sent your data and approvals. Your proposal says exactly. I'll sign an NDA before we talk if you want one.

What I need from you

- ✓ The screens and roles as you imagine them; I turn them into a prototype for sign-off before the full build.
- ✓ A Google Play Console and Apple Developer account in your business's name (I can guide you, or you add me as a developer).
- ✓ Your brand assets (logo, colours), if you have them.
- ✓ One person who approves each stage.

Terms in short

A plain-English summary of how we work together, not a contract.

- ✓ You pay a setup fee and a monthly plan. I host, maintain and support your software.
- ✓ Your data and your accounts are always yours. The code is yours when you buy it.
- ✓ Monthly plans have a 6-month minimum, with two ways to leave early.
- ✓ Small changes are included each month; bigger ones are quoted first.
- ✓ If I ever stop offering the service, the code and your data pass to you free.

Questions clients ask

Do you build for both Android and iPhone?

Yes. Each app is built once in Flutter, Google's toolkit for making one app that runs on both, and released on both, so you don't pay for two separate apps.

Do I need both Android and iPhone?

Not always. An app for your own staff can go Android only if everyone on the team uses Android phones, which also saves the yearly Apple fee. Because the app is built once for both, adding iPhone later means testing and publishing it, not rebuilding it.

Who owns and pays for the app store accounts?

Your business. The Play Store and App Store accounts are created in your name, and you pay their fees directly to Google and Apple: a one-time fee of about ₹2,400 for Google Play and about ₹9,000 a year for Apple. I guide you through setting them up, then manage them for you, or you add me as a developer.

How long do the app stores take to approve the app?

Typically 7–14 days after I submit it, and sometimes longer. Apple and Google review every new app and every update, and sometimes ask for changes before approving; I handle the submission and anything the reviewers ask for. The store review is built into the timeline in your proposal.

How do updates reach the people using the app?

Through the Play Store and App Store, like any other app update. Bug fixes are covered by the monthly plan, and after the first 90 days small changes up to 3 hours a month are included; new screens or features are quoted first.

Can the app connect to software we already use?

Yes. The app can work with systems you already have, such as Tally, your website or a payment gateway. Each connection is named and priced in the scope before work starts.

Does the app work on weak internet?

Apps used on site or on the road can be built to keep working on weak or no internet and sync once the connection is back. This is agreed in the scope.

Our team isn't very tech-savvy. Will this work for us?

Most likely. I keep the screens simple so teams pick them up quickly, and they work on a phone. A handover session is included in setup; extra or on-site training is quoted in your proposal. You'll need one person on your side who owns it day to day.

Questions clients ask (continued)

Whose name are the accounts in?

Yours. App store accounts, your domain, your WhatsApp number and payment gateway are all created in your business's name. For the domain, you can buy it yourself and give me access, or I can buy it for you; either way it sits in your own account. I manage the rest for you, or you add me as a developer.

Can you build an app for millions of users?

That's not what I focus on. I build systems for businesses and their teams, dealers and customers, from a handful of users up to typically 50,000 to 90,000 monthly active users. I can also build MVPs designed to grow to that size. I'm a one-person studio, and that focus keeps your costs predictable and lets me give each client proper attention. If you're building a mass-market consumer app, a larger team will serve you better, and I'm happy to point you to one.

Can I see a demo built for my business before committing?

Yes. I can build a working demo around your own process and data, so you see exactly how it would work for you. It's priced as a small share of the estimated project fee, confirmed once we've discussed the scope of work (SOW).

How quickly do you fix problems?

On working days (Monday to Friday), I reply to anything that stops your work within 1 business day, and to everything else within 3 business days.

What if you stop working on this?

If I ever stop offering the service, the code and your data pass to you free of charge, so your business is never stuck.

Who owns our data?

You do, always. If the plan ends, you get a full export of your data.

Are there other costs?

GST at 18% is added to all prices. AI usage and third-party services such as WhatsApp are billed at cost, as separate lines on your monthly bill. Every service your system uses is listed in the agreement before work starts, so nothing new appears later without your approval.

Thank you

Tell me what's slowing your business down.

Reply to sohamkar.work@gmail.com with a time that suits you, or fill out the form on my website. I reply by email or WhatsApp within 48 hours, and your written proposal comes after a free call.

I'll sign an NDA before we talk if you want one.
